Solrik AB

How we work – site safety, quality and environment

A summary for those who want to know how Solrik works before hiring us – for procurement, supplier assessment or a board decision.

Organisation and responsibility

- Solrik AB (company reg. no. 559200-5077) is part of Radiant Group, with its office at Aspögatan 1 in Malmö. We work throughout Skåne County.
- One contract for the whole assignment – we coordinate every trade and subcontractor.
- Subcontractors hold the right qualifications for their tasks and meet the same requirements as we do.
- A named contact person follows the assignment from start to final inspection.

Site safety

- A risk assessment before every assignment and a work environment plan when the assignment requires one.
- We act as safety coordinator (BAS-P and BAS-U) when required.
- Everyone working on site is briefed on the site, the risks and the protective equipment.
- Incidents and accidents are reported and followed up so they are not repeated.

Quality

- Self-inspections as the work progresses. The documentation is handed over at the final inspection.
- Wet rooms are built to the industry rules for wet rooms, with documentation.
- Warranty under standard industry contracts, with a warranty inspection before the warranty ends.

Environment

- Construction waste is sorted on site into the required fractions.
- Durable materials, documented for future maintenance. Reuse where possible.
- Proposed energy measures are costed, so you see both the saving and the payback time.
